

# TRAVEL TIME

## Improve the visibility of travel time on your roads!

Equipped with a Bluetooth device, the Maîtrise Technologique system provides information on travel times and informs your customers in real-time.

In fact, through each emergency call station, the bluetooth data is recorded and analyzed.

It will allow you to have a better visibility of the traffic in real time and of possible dangers for users on the road

## Benefits

- Analysis and processing of data in real-time.
- Configurable data collection.
- Optimisation of existing infrastructures.
- Reliability of travel times.
- Customising services for your clients.
- Low consumption, energy autonomy (solar).
- Availability on different media (optical fibre, radio networks, LAN networks, etc.).
- Better visibility of roads events.
