# Industry

Strength and reliability.

Industries are environments that require robust and reliable products. We pride ourselves on having equipment that will allow a faster and more relevant response to help provide a secure and reliable solution in the case of problems.

We adapt to the needs and environments of our customers, offering solutions based on different technologies, which can be implemented in their traditional forms or in ADF envelopes.

Smart Infrastructures

Our emergency call stations coupled to existing or integrated cameras will, when the button is pressed :

- Provide visibility on the environment near the accident.

- Notify the rest of the employees via broadcasting an evacuation or security message across the entire emergency call network if applicable.

- And of course, reassure the individual(s) and take care of them as soon as possible.

In addition, it is possible to use the emergency call network as a backbone for the feedback and processing of LoRa (IoT) instrumentation data.
